I'm a alfalfa farmer . It has made me a good living. I mainly sell to broker who sells to feedlots in our area. In our area of southwest Kansas it is very expensive

to grow.

What is happening is with the freedom to farm whatever we want and still get paid for crop bases that are established. Alfalfa is being planted in other areas where

once was wheat and or corn or whatever else which once planted. This is creating a flooded hay market in our area. I believe the new farm bill ought to

protect specialty crops. There once was time when I planted alfalfa , I carried no insurance received no government payments and did well. Now our market is

being destroyed.
