City: Pierre

State: South Dakota

zipcode: 57501

Question1:

Question2:

Question3: assistance to large farms should be capped. Wheat farmers in Western S.D. have plowed up tens of thousands of acres of highly erodible land which shouldn't be farmed. The result is rapid siltation in the Missouri river. These operators also receive huge federal subsidies. The more they plow up the more federal subsidies they receive. Vast stretches of the Missouri Coteau prairie in east central S.D. is also being plowed up at an alarming rate. Conservation organizations such as DU, Nature Conservancy, etc. are trying to stop it. USDA should allocate more money for grassland easements and other conservation programs.

Question4: These goals can be achieved by expanding the CRP program. Fewer people have signed up for CRP in S.D. in recent years due to fact criteria for enrolling has become too stringent. Enrolling more land in CRP, especially drained wetlands should be high priority.

Question5:

Question6:
