Question1: give a brake financially is always going to help ones goals to be a better farmer secondly making the grant monies not to complicated is another way to help. there is far too much of our hard earned monies going to other countries and our health care is a sham for the farmer . just to pay for a policy for a farmer and his family takes every bit away from paying for crop seed and things to prepare the ground to plant the seed its a dirty sham and believe me the smaller farmer will HAVE to give up even if its his life.

Question2: help take care of our own and then the other countries you will see much more progress around the world help meet the needs of our citizens first ...after all you get back what you give .please think of us here in the us...there is enough wasted and no return from so many other countries .

Question3:

Question4: invest in the us the united states..help the people who truly have an ideal to make things better ...ask ..look around you ITS IN FRONT OF YOU...there are people like me that want to help but financially can't and its not because I am dumb..right now I am concerned that I will lose my farm..I can't understand even how to apply and complete a grant form due to so much to fill out and steps ..yes I could be of so much more help to others and teach ...educate people about farming,forestry,fishery,ranching ..agriculture but it takes money after taxes which is a killer theres nothing left we the people need you the government to stand by us or we will perish mark my words.

Question5: common sense help us with medical..dental..the things that come natural to a rich person look to our seniors and the young..we need better health coverage its killing the average US. citizen. just do the right thing make health number one ..make farming worth something that the farmer feels proud to contribute instead of fearing that he is defeated and no where to turn...the average farmer is losing his family to poverty ..there is no money left over to put back so the children can go to college .children are looking down at their parents for not providing for their futures. and moving to the big cities because theres no hope ..and all suffering .what a shame all because our monies we work so hard go to other countries who turn on us and don't care about us ...ITS A FACT but WHAT I WANT TO KNOW WHICH ONE OF YOU WILL COME TO OUR RESCUE...please use common respect to we the people and keep us going by financing in us our health our childrens future...whats so wrong in that sir with all respect..I am just heart broken some times ..you see I live all around farmers in Illinois and its a shame the way most smaller farmers make do.

Question6: with experienced farmers that want to see and act to make a better crop and safe equipment and efficient way to get it to the people .. make prices affordable to buy
