Question1: We need higher prices for wheat and milo. Because we can't make it on \$3.00 wheat in this area. I have been farming for 42 years and it is harder now than it has ever been. It should come in price supports or direct payments. Similar to what we have now. Land prices have not gone up any here but we can't have our kids farming because there isn't enough money in it to support them. I have family that would like to farm but we can't make it.

Question2: Stay with the same type of program.

Question3: Most farms increase in size to make up for low prices. Large farms are not as efficient as smaller ones. Design the farm bill to go to smaller farms and areas that need the help. Farms that can grow 200 bushels of corn and farms that grow 30 bushels of wheat are lots different.

Question4: I think we are working on the right track.

Question5: We are trying new ideas but nothing seems to work very good.

Question6: We need new markets for all our production.
