Question1:

Question2:

Question3:

Question4: First off I would like to note that I am neither a farmer or a CRP landowner, just a working taxpayer. The CRP program is the best program ever to come out of USDA. This program has provided more benefits to more people than any "commodity" program ever has. I am an outdoorsman and conservationist. The CRP has resulted in some of the best wildlife populations in this nations history. Specifically pheasants in the Dakotas, ducks and a vast array of other wildlife both game and non game. The continuation of the CRP at its current acreage is imperitave to the future of hunting and conservation in this country. To narrow it down even further I am speaking of the nearly 5 million acres currently enrolled in North & South Dakota. Re enrollment of these acres is critical to the future of waterfowl as well as the finest upland hunting we currently have in this country. I speak for the "silent majority" when I ask that the CRP program remain at its current acreage levels, especially in the aforementioned areas.
