zipcode: 95815

Question1: I would like to see every possible effort made to support small family farms as opposed to large agribusinesses.

Question2: Our farms will be most competitive when we produce healthy good quality food. We can best do that by organic methods and flavorful heirloom varieties.

Question3: Government programs need to help small farmers, agribusiness can take care of its self!

Question4: Agribusiness destroys our environment, and pollutes our air and water. Organic farms improve the land, preserve heirloom varieties and provide habitat for other species. Government farm policy needs to help them do so.

Question5: Help the small farmer, especially the organic farmer, in any way you can.

Question6: Promote organic, and specialty crops such as colored cotton and flavorful heirloom varieties. Generally reduce our dependence on pesticides and chemicals. Its better for our health, animal health and the environment.
