Question1:

Question2: In looking at the costs in American agriculture the only way we are going to continue to be competitive is to increase supports or reduce costs. The problem with reducing costs is that we cut the final product volume down creating shortages and higher prices, and a non-profit situation for a farmer. We need a price support system for sustaining the future of American agriculture. The CRP program in my opinion only paid someone to go and rent better land driving the costs up for all. If land is not productive the pure economics will dictate such an outcome.

Question3:

Question4:

Question5: With all the increasing costs of farming in this modern era, the farmer has had to consistently increase his yields. We need prices also to go to the next level for farm to remain economically viable. By doing so the farmers will continue to purchase local goods and services, rather than looking for a larger wholesaler to bring the prices of goods lower.

Question6:
