Question1:

Question2:

Question3:

Question4: When both the gov't and the public realize that we all profit when agricultural practices follow sound environmental principles, then we will be closer to achieving conservation goals.

Using more organic practices, not polluting our streams and rivers with run off from pesticides and agricultural waste products, keeping a balance between forest and farm land, having fewer macro-business "farms" and paying attention to the worldwide problem of top soil depletion are all things we need.
