Question1: Stop funding mega farms that are destroying our land and poisoning our people. Stop emphasizing inputs that force farmers to buy seeds each year and spread GMO pollen to nearby fields.

Question2: Other countries don't want poisoned food - they have more sense. Test all cows for Mad Cow. Stop GMO drift. Label all foods with GMO. Food comes from the ecosystem. Lets not destroy our niche.

Question3: Stop farm benefits. Stop pushing pesticides and chemical fertilizers. Teach sustainable farming. Use natural methods like homeopathy to prevent antibiotic use in our food supply - much cheaper and safer and much more effective.

Question4: Farms should recycle all waste on site - using sustainable farming principles. Lets get rid of factory farming before we worry about the forests. Farm programs have not brought benefits to anyone but mega farms - bankrupting small farmers, and destroying the quality of the food offered to America. All in the name of profit. Americans consume pesticides, hormones, antibiotics, and other such, under the name of progress, and then 49 million lack the health insurance to deal with the consequences. Food and health are a loop - let's connect the costs.

Question5: Lets forget the technological boondoggles. We have had enough of bright chemical ideas and almost destroyed our capacity to produce nutritious food. Help farmers convert to organic farming - and not some watered down concept - but the real thing. People are desperate for food that tastes good and brings good health. Organic food is astounding and much richer in nutrients. Even our dog refused non-organic carrots.

Question6: The government has just about destroyed everything it has touched. Let's let consumers vote with their purchasing dollars and keep the government out of it - unless the government is prepared to get the poisons out of our food - poisoned children don't make good citizens - our national health is terrible - lets connect the dots and return to organic food. Foreign countries want safe food - not our version.
