zipcode: 34223-7170

Question1: Give discounts for farmers on land or give them favorable mortgages and low percentages.

Question2: You'd best include organic and get rid of most of the antibiotics.

No one likes to learn that the pill that they HAVE to have has lost its effectiveness because it has been used on farm animals and ingested.

Chemical fertilizers

pollute our rivers and waterways

because they are overused. Encourage use of fertilizer. Check water near farms; if polluted and the pollution comes from fertilizer fine the farmer.

He has no right to ruin my water.

Question3: Plan programs for the family farm instead of trying to get rid of it. You have been trying to be efficient. Sometimes it is better to be middling efficient but kind to more people.

Question4: No hog farms or chicken cage farms until a satisfactory sewer system has been worked out.

This would not allow open pond and the stench. I also believe that animals should not be crowded the way chickens and

hogs are. Torturing animals makes it easier to torture people.

We become immune to living suffering. Regulate the amount of fertilizer that can be used.

Insist upon green ways by all waterways. Get busy.

Question5: Farms have become so huge that there is only one group living in the area..the farm and group working on the large farms. Break the farms up. Go for small. Get more coops going to share the machines. No more technology is really needed. Just common sense and a decision on who you are going to help.

Question6: More organic, more range chickens, more attention to home grown produce. Chile's raspberries are sour, yet I have to eat them because the super market says they have to buy them. Pay a living wage to the immigrant labor, and give them decent living conditions..or keep them out of here.
