Question1:

Question2: There should be NO GENETICALLY ENGINEERED CROPS. The rest of the world does not want this stuff, nor should we be consuming it. It is time to help farmers make the transition to sustainable organic growing methods on a large scale!

Question3: Give more support to the small organic farmer who is making a great contribution to our quality of life.

Question4: By going organic, of course. People need to buy their farm products close to home. All this packaging and shipping is so polluting. Again there is the need to support small local organic farms.

Question5: Ask the rural farmers what they want, and help the financially, encourage them to grow organically and provide incentives for organic growing.

Question6: Would love to see more renewable energy and bioproducts.
