Question1: Land equipment costs are high. Extra assistance must be given to new farmers and ranchers. Federal agencies need to invest in more one on one contact and a degree of caring for the new enterprises.

Question2: As oil is inflated, inflate the price of crops produced by farms. When those that have oil realize that a loaf of bread will cost \$20, perhaps they will stop holding the US and the world hostage.

Question3:

Question4: Programs like WHIP, WRP, CRP, CREP and others must be maintained and increased. Wildlife, as well as clean air and water, will benefit. The need to see real wild animals outside zoos is important. Give more importance to groups like PF, QU, DU and the others that create wildlife habitat. That habitat also protects our air and water resources.

Question5: Stop the encroachment of urbanization. As people move next to dairies and farms, they demand and get more stringent controls over our food production. Time has come to end the role and importance of certain so called environmental groups that do nothing except stop food production and environmental protection through various programs. More importance needs to be given to such organizations like PF, QU, DU, and the rest that strive for a cleaner, more productive land.

Question6: We must make scientific advances in crop production and pest elimination if we are to continue feeding the world. We also need to provide the grower a fair return on his or her product.
