Question1: Do more to encourage small enterprises that utilize organic, environmentally friendly practices.

Question2: Discourage agribusinesses from developing genetically engineered crops and growth and milk production hormones. Foreign and domestic markets are demanding less of these yet, US agribusiness is trying to sell more.

Question3: Target erodible lands, wetlands, and watersheds for CRP type programs. Avoid large single producer pay-outs. Encourage conservation opportunities for farmers.

Question4: Stop subsidizing large agribusiness. Focus on encouraging stewardship of land and natural resources (especially water quality, wildlife, etc.) on a global scale.

Question5: Educate and assist in local farm to consumer uses (farmers markets, direct to store/restaurant marketing, etc.).

Question6: Why should this be a taxpayer responsibility instead of a market driven issue?
