Question1:

the currant policies are somewhat weakening the SMALL farmer while STRENGTHENING the larger farm corp.If you run the small guy out you have ruined the base for your farming community,while protecting SPECIAL interests of large operations only.It becomes a one sided affair with the small farms getting no say.

protecting the MANY small farms will benefit the farming community greatly.

Question2: We need to continue our research in agriculteral bio-products and market/advertise such ideas and raw products. for example:bio-diesel,ethanol-fuels,ect.

Question3: don't make it so everyone OVER produces.By expanding alternative farming practices such as CRP,superior biologically enginiered crops that we can SELL to other struggling countries that are resistant to their crop diseases,continue to be the WORLDS leader in these areas

Question4: the CONSERVATION RESERVE PROGRAM and all the other PROVEN succussfull programs such as buffer strips,WHIP, forest reserve programs,wetland restorations all DO make a differance in many areas by improving the water quality,stopping erosion,and improving over all quality of life,recreation, countless wildlife benefits and wildlife success stories,economic stability for rural areas and the list goes on...

Question5: the continued assistance to these areas is needed by way of major programs such as CRP,wetland restorations and other conservation programs AS WELL as investing in new technologies

Question6: They should be encouraged and promoted beyond the level they are at now.
