Question1: The capitalization of program benefits into land prices.

These higher land prices are cited as a barrier to entry into agriculture for new farmers; a factor in reduced profit for existing farmers; and a cause of weakened competitive position on the part of U.S. farmers compared with farmers in countries with lower-priced land.

Question2: We should maintain agricultural subsidies like in the EU and push to sell our products all over the world.

Question3: Make the program work for small, medium and large farmers.

Question4: Builds farm policy around the clean water and clean air acts.

We should have a sound environmental policy vis-a-vis- agriculture.

Question5: Government attention should be focused on investing in the infrastructure in rural America (for example, investing in new technologies).

Question6: Enabling greater support for a broader range of activities helpful to agriculture market expansion. Examples are: attention to product quality and new attributes; organic and specialty crops; value-added products, including renewable energy and bioproducts and new uses for farm products generally; expanded basic and applied research; domestic and foreign market development; and similar activities.
