Question1: Need to have monies set a side for Forest Land acquisitions by individuals.

In the northeast could pay a couple hundred dollars/acres to individuals who buy 50 acres or more of forest land.

Question2: We should have a value added tarriff on raw timber products sent out of the country.

It would help keep jobs in america.

We cut off our USDA Forest lands and the cheap timber is shipped to a boat in international waters and then they sell the lumber back to us at rediculus price.

Canada hauls cheap logs north brings expensive lumber south.

Question3: The USDA needs to start paying the private land owners a payment for noncommercial treatments in wood lands.

These thinnings help to produce better quality timber in the future.

Question4: Good Forestry practices are good for society.

Good foresty practices can be achieved by funding State and county forestry programs. Increasing funding to soil service of USDA would also help benefit society.

Question5:

Question6:
