Question1:

Question2:

Question3:

Question4: Considerable research in the context of Urban Forestry suggests that people are more interested in and committed to natural resource stewardship when they know something about it and have a strong commitment to it. Both knowledge and commitment, in turn, are greatly facilitated by first hand experience and participation. This in turn points to the importance of a strong focus on CSA's and community gardens as an important factor in gaining public support for meeting WTO obligations.
