LastName: Bryant

Address1: P.O. BOX 119

Address2:

City: Humnoke

State: Arkansas

zipcode: 72072

Question1: I will comment on this later.

Question2: I will comment later.

Question3: comment later

Question4: The way to achieve conservation and environmental goals will be to decrease the inputs into the soil. The continuous depletion of the natural nutrients from the soil without the opportunity to heal itself will prove to be disastrous for the next generation. The land must be given a time of rest. I suggest a seven year program. This will give the land time to rest and the long range goal will be beneficial to USDA, farmers, and the general public. Full details can be obtain upon request.

Question5: The government have made great strides in getting information into the hands of the farmers. But, there are still some rural area that have fallen through the proverbial crack. The assistance given need to be narrowed to a specific group and hand fed.

Question6: Get back to the basic, we must take drastic care of the soil, if we want the soil to take care of food production over the next century. The soil is the only thing that can not, be cloned or reproduced.
