Address1: 96 Poplar Street, NW

Address2:

City: atlanta

State: Georgia

zipcode: 30303

Question1:

Question2:

Question3: Create a farm size/output ratio. Farmers would receive benefits based on highest yields/farm.

Question4: Land owners should receive tax benefits for land conservation, especially areas of private forest lands. Forests help provide clean air and water to support our communities. Urban forests are equally important. In addition, forest and farmland can work together effectively. Trees provide windbreaks for crops and help divide properties as a natural fence. And of course, forestry is an important industry--utilizing a natural, renewable resources for business. Farm policy can best achieve conservation and environmental goals by actively protecting pristine areas, offering tax benefits to private land owners who donate land for conservation and implementing outreach about the importance of building/farming density.
