---

I am a citizen of Michigan who is deeply concerned with our Nation's Food system. Our nation has become a nation of cheap, non-wholesome food. We truck our food all across the nation instead of encouraging our citizens to support and consume local, in-season food. Subsidies go to the large mono-crop farms and those farms are using heavy amounts of chemicals and are killing our land.

We need to have our nation take some steps back in time in order to take steps to improving our food system for the future. We need to encourage the small farmer to succeed and not to bankrupt him. We need to ban GE crops and take the stand that most of Europe and the rest of the World is taking by not allowing GE crops and produce into their countries.

As a member of our Government, I am begging you to help our small farmers, our food system and the World by supporting the programs that help provide local food and strike down those programs that encourage the large mono-cropping farms and the GE crops to flourish. We also need to continue to support those in need and try and wipe out hunger in our land.

Thanks
