Question1: The number 1 reason young farmer have trouble getting into farming is land. They naturally will not get the best land to rent at first, so they need second quality land and guess what its in CRP, wet land reserve and so on. I know this as a fact as I have 2 young sons trying to farm.

Question2: For sure insure transportation to mkts. including ports.

Question3: Forget production go to soil erosion. It is unbelievable that one can take grassland plow it for three years then put it into CRP thus robbing young farmers the chance to farm it by zero till methods, or using the pasture land for grazing livestock. All Crp is a easy retirement program.

Question4: Wildlife, crp has done little for birds arround here. I have more quail arround my soybean fields no till than on any of my crp acres. Which only supports deer which we have plenty of. By the way I bought the farm the CRP is on. Again zero till is the answer along with cover crops things like that. Not only will it help the soil it gives us some production to sell not just idle ground.

Question5: Again when CRP came out there went small business. Improve roads in rural areas promote livestock feeding such as that, don't make rural areas into urban areas however that have no use for farms arround them.

Question6: Promoting all the above is worthwhile rather than just commodities
