zipcode: 65043

Question1: remove government farm subsidies.

Question2: It is a different world. We cannot compete the way we used to. Look toward niche markets and large trade agreements. Join the rest of the world with environmental concerns - Ag industry needs to take more responsibility for surface and groundwater pollution.

Question3: Stop favoritism and cronyism. The rich get richer and their farms get larger. Eliminate or discourage large corporate farms.

Question4: Find the point sources that are currently classified as nonpoint source water pollution. About 20% of the farms are causing 80% of the pollution. If cooperation isn't working then we need heavy enforcement.

Question5: Look at net worth. If a farm's net worth is less than the median or average in that county, then they could receive government investments. If laws cannot be met, then maybe the producer needs to downsize to where they can better meet their responsibilities.

Question6: Use gov payouts for market development rather than subsidies.
