Question1: An incentive program where farmers retiring have tax benefits to sell land to young farmers so retiring farmers can enjoy the increase of land values while passing the land onto new farmers and ranchers.

Question2: Put the world on the same environmental and USDA regulations that we must operate under. If they do not abide by our standards they can not ship their product into our market no exceptions.

Question3:

Question4: Do not impose standards on the US that give unfair advantage to others in the world. Force the same standards on developing countries.

Question5: More investing in technologies that are used by ag.

Question6: COOL would be the biggest help as the consumer can then decide if they want to pay more for US products. Until gov't stops being lead by, for example, processors true help for farmers and ranchers will not be met. Cheap food is going to kill the American farmer and rancher.
