Question1:

Question2:

Question3: American food is not cheap. It has and will cost me thousands extra. My son has grade 4 cystic acne, the worst kind. My opinion is that it was caused by all the growth hormones injected into beef, poultry, milk, etc. My son's mother and I never experienced acne at all during our adolescence. Therefore, my son is not predisposed genetically to cystic acne, and his hygiene has always been adequate.

I've cowboied for many years and I've administered several hundred doses of growth hormone to beef cattle. I didn't like it then and now I'm hating it for the suffering it has put my boy through. I would like give the rancher a shot of it and see if it would make him blow up. I never inject my own livestock with ralgro. At a very young age, all these girls are developing breasts, large waists, and flat butts. My son met puberty 2 years before I did. Acne is caused by a hormone imbalance. Boys usually do get acne worse than girls and today they are getting the painful cysts. Studies indicate that environmental factors are the cause of all this.

I know people in their forties that are getting cancer while their own parents are just getting old. Heart disease and diabetes is on the rise. Processed, chemical laced, hormone induced American food is not cheap.

I recommend you drastically reduce the subsidy payments to all. It's long term effects result in greed that poisons our bodies. Only reward agriculture that is practiced in the most natural, healthful way. There is a growing group of farmers and ranchers that love the organic methods that makes our environment and our bodies healthier.
