Question1: The people of the US need to recognize that farmers control a great part of the habitat in the country.

We should find ways to provide incentives for farmers to gain income through tax offsets and negative tax payments to people that own land that is keep in appropriate habitat or is returns to more appropriate use. This could be riparian areas, wet lands, forest plantations.

There should be some way to assist farmers in such programs as carbon sequestration, wetland payment (rent), incentives to return areas to natuaraal uses. Subsidies for planting habitat for wildlife use could be provided.

A good example would be returning hegrows to fields.

I haope that this helps. Time to reclaim rural lands for something besides land banks.
