Question1:

Question2: the practice of food dumping is not helping with the competitiveness of the U.S. market. A good solution to look into and that SHOULD be implemented is a policy made by Daryll E. Ray called the farmer-oriented policy blueprint, there is an article at www.southwestfarmpress.com in the Southwest Farm press regarding and explaining this policy, I believe that the United States agriculture would greatly benefit with the implementation of this policy.

Question3: The Farmer-Oriented Policy Blueprint would allow for crop prices to rise by at least 37 percent and would thus increase farming income which would then decrease farm subsidies. Incentives should not lead to increased production and lower market prices, they should lead to less overproduction, higher prices, and more storage owned by farmers and less owned by the government

Question4: The farmer-oriented policy blueprint has a section which would allow for a long-term retirement of cropland by the farmers where they would be given incentive to practice conservationism on (southwest farm press, Ray)

Question5: LESS FOOD DUMPING! LESS SUBSIDIES and the implementation of the farmer-oriented policy blueprint.

Question6: Organics, and definitely foreign market development, but development of local foreign rural farmers, not U.S. farmers development in foreign markets.
