Question1: Priority discounts on land should be given to farmers who use energy-efficient technologies, organic farming methods, and practices which reduce or eliminate degradation of streams and watersheds

Question2: Emphasizing the health and environment benefits to our world from organic farming as a selling point

Question3: Stop paying farmers not to grow crops and start giving priority to those who use non-polluting,energy-efficient technologies and organic growing practices.

Question4: Establish national standards for organic, non-polluting, energy-efficient growing practices and national testing for those standards. Start subsidizing according to compliance with national standards. Establish national and local assistance to farmers through university extension programs, FDA programs and Import/Export standards advisors.

Question5: Distribution of help in establishing ecologically sound practices through a national advisory board with local representatives who provide workshops, information, and coordinate with university and college agricultural programs.

Question6: Follow the above suggestions!
