Question1: Farmers should not have to pay high property taxes.

Government can give large grants to new farmers and ranchers (and make it easy to find grants for the individual person). Lower taxes on farmers income so they can put it back in to the farm. Stop protecting the large combines / companies in the agor business. MORE HELP FOR THE LITTLE PEOPLE.

Question2: Farmers need to buy their stock and supplies cheeper. If they can do this the price per head comes down and we can compete with Asia.

Question3: See if people will relocate and start up a farm. We need more family farms. I want to start a farm, but I have no money because I cant find a grant. Stop giving to the large farmers and ranchers and give more the little people and see if new people want to start farms. Set aside land for those people, that can be bought at a reduced rate through the government.

Question4: Maybe any new farms that get a goverment grant should be required to be organic or all natural.

Question5: Americans want things like technology, DSL, Satellite TV, anything to make life a little easier. If you invest in infrastructure in rural areas maybe people will stay.

People are going to go where the things they want are...

Question6: Less research and development it wastes money, when the farmers can use it. Educate new farmers on how to grow organic foods. Provide each farmer with a point of contact who is an area expert on what they are growing, so they have guidance.
