Crop Yield Variation

NCCPI Across the Midwest

Climate Factors

■ Inputs

- Temperature
- Precipitation
- Solar radiation
- Carbon dioxide

Direct
Growth
Phenology
Yield

Indirect
Insects
Diseases
Weeds

Soil is the underlying factor as a resource
for nutrients and water

Weather Trend: Unusual combinations of spring and summer rainfall are occurring more often

Spring and Summer Rainfall In Iowa (1893-2013)

1-in-20-yr return in 1893-1980 has 1-in-4-yr return in 1981-2013

Data Source: State of Iowa Climatologist

Every 1"
Increase of
April-May
Rainfall
Reduces
Suitable Field
Days by 2.6
days

Maize yields are projected to decline across the corn belt and growing regions lost in the Great Plains

Takle, E S, et al (2013). US Food Security and Climate Change: Agricultural Futures. *Economics: The Open-Access, Open-Assessment E-Journal*, Vol. 7, 2013-34.

Electromagnetic Spectrum

Vegetative Indices

$$\text{NDVI} = (\text{NIR} - \text{red}) / (\text{NIR} + \text{red})$$

$$\text{SAVI} = (\text{NIR} - \text{red}) / (\text{NIR} + \text{red} + 0.5) * 1.5$$

$$\text{PSRI} = (\text{red} - \text{green}) / \text{NIR}$$

$$\text{Ratio} = \text{red} / \text{NIR}$$

Often use 30+ different vegetative indices to estimate canopy parameters

Seasonal Reflectance Data

Corn 2010

Canola

Seasonal Patterns of NDVI - Corn

Fall strip with 135 kg ha⁻¹ (○),
Fall strip with 135 kg ha⁻¹ with N-serve (Δ),
Spring strip with 135 kg ha⁻¹ (□),
Spring strip with 191 kg ha⁻¹ (◇).

Seasonal Patterns of PSRI - Corn

Fall strip with 135 kg ha⁻¹ (○),
Fall strip with 135 kg ha⁻¹ with N-serve (Δ),
Spring strip with 135 kg ha⁻¹ (□),
Spring strip with 191 kg ha⁻¹ (◇).

Patterns Across Years – Corn

Applications of NDVI

Light Use efficiency

Radiation Use Efficiency

Leaf Area Estimation

Senescence Index

The longer we can maintain green leaf area during the grain-filling period the higher the yield

GPP vs CI (Corn)

Irrigated and Rainfed Maize

Framework For Agronomic Systems

Corn: Lost Area and Production

Crop Progress-Iowa

Drought Progression

U.S. Drought Monitor

February 3, 2015

(Released Thursday, Feb. 5, 2015)

Valid 7 a.m. EST

Author:
Brian Fuchs
National Drought Mitigation Center

Drought Impact Types:

- ~ Delineates dominant impacts
S = Short-Term, typically less than 6 months (e.g. agriculture, grasslands)
L = Long-Term, typically greater than 6 months (e.g. hydrology, ecology)

Intensity:

- D0 Abnormally Dry
D1 Moderate Drought
D2 Severe Drought
D3 Extreme Drought
D4 Exceptional Drought

The Drought Monitor focuses on broad-scale conditions. Local conditions may vary. See accompanying text summary for forecast statements.

NDVI Global

May 9-24

July 12-27

Utility of Remote Sensing

- View of spatial and temporal dynamics within and among growing seasons
- Detection of canopy parameters beyond crop yield and placed in a context of plant growth dynamics
- Evaluate the change in response relative to weather variation
